

Electric Floor Sawing

Our 3 phase electric saw is capable of a maximum cutting depth of 200mm. This machine is used for interior situations where internal combustion engines cannot be used due to the carbon monoxide emissions.

General locations where this electric saw is normally used are shopping malls, supermarkets, hospitals, offices, banks airports and warehouses. In these situations it is the perfect tool for efficiently cutting for a variety of requirements such as new floor ducting, drainage, loading bay constructions and internal building foundations.
